Sq ft of Pallet	31.5 sq ft	63 sq ft
Sq ft of Circle	25 sq ft	50 sq ft
Diameter of Circle	5ft	8ft

-  Circle Stone
-  45 Taper Stone
-  Square Stone
-  15 Taper Stone
-  3/4 Stone

Maximum Load Bearing Capacity

Stone Height/Thickness	Maximum Load Baring Capacity
1 3/4" Thin Classic only	Heavy pedestrian
2 3/8"	Light commercial traffic
3 inch	Heavy commercial traffic

DURABILITY AND STRENGTH

Millennium's pavers are extremely durable and will facilitate high traffic. They are suited to different landscaping applications; from pool decks to heavy commercial areas. They can be used on walkways, driveways or parking areas within residential, commercial and municipal construction projects.

FLEXIBLE

Because paving stones move with earth, they do not crack in the same way as would continuous concrete pavement system. They offer endless possibilities for design patterns, architectural style, shape, and colours. Need access to underground systems? Then, paving stone is your BEST option. Because they are not laid in cement, the pavers can be taken up to access underground infrastructure; the same stones can then be reused to reconstruct your pavement.

LONG TERM COST BENEFITS

Interlocking paving solutions provide an easy repair and recycle solution. If they ever become damaged or stained, simply remove the damaged pavers and replace them with new ones. Millennium's pavers maintain their structural integrity for years and their aesthetic appearance by intermittent coating of sealant.

FAST INSTALLATION

Once installed, Millennium's paving stones can be immediately trafficked. Be aware however, that the preparation of the sub-base is as critical as the use of high quality Millennium pavers, so care should be taken to follow the proper procedures for a good installation.

ENVIRONMENTAL RESPONSIBILITY

Millennium's pavers are manufactured as small segmented concrete units. When these are interlocked, they create joints through which water seeps to the earth beneath, resulting in a reduction of storm water runoff and the preservation of the natural water cycle. Our pavers are made from non-toxic elements that will not leach any harmful chemical into the environment.

Cobble Mix

This premium stone is a series of rounded stones used in combination as pavements. The Cobble Mix is available in two options (a) 3-parts and (b) 4-parts. The Double stone is added to the 3-part to create the 4-part Cobble Mix.

By using a combination of stones in different sizes one is able to recreate a pre-20th Century artisan road effect. Stones are laid in a random pattern to create a more natural look.

Stones/Pallets	Full	Half	3-Part Supply Ratio	4-Part Supply Ratio
Double	119.28	59.64	-	1/6
Regular	126.91	63.45	1/3	1/6
Square Half	130.97	65.48	2/3	2/3

The Square and Half Stones are supplied on the same pallet in a ratio of (1 sq stone : 4 half stones)

Half Stone

Heritage Family

This is one of our premium stones. It is a combination of three (3) different size stones. These stones have straight edges with a dimpled surface giving the stones a natural look, especially when laid in a random pattern.

By using a combination of stones in different sizes, one is able to recreate a pre-20th Century artisan road effect. The Regular and the Square Stones from the Heritage Series are available individually.

Pallet	Full Pallet Sq ft	Half Pallet Sq ft	Supply Ratio
Regular Stones	120.9	60.45	1/3
Square Stones/Half Stones	130	65	2/3
Square Stone	128	64	

The Square and Half Stones are supplied on the same pallet in a ratio of (2 half stones : 5 square stones)
